Aliasing / labeling an IP Address

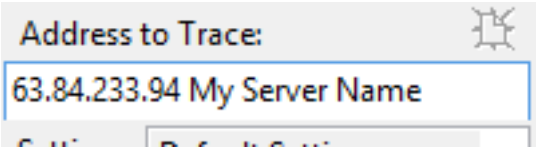

Saved From: https://www.pingman.com/kb/article/aliasing-labeling-an-ip-address-23.html

Question

Can I associate a 'friendly name' with an IP Address? The automatic name doesn't really help identify a target.

Solution

Yes, you can! Both PingPlotter and MultiPing offer a mechanism for associating a friendly name with an IP Address. To do this, enter a name after the IP Address, like this:

This will result in that host showing up as 'My Server Name' throughout the program.

You may also rename any hop by right-clicking a hop, hovering over the hostname, and selecting Edit Name...
